Profile

Software Developer and Systems Analyst with a strong background in web development, API integrations, and automated testing. Experienced in building applications using modern frameworks such as Laravel, React.js, Vue.js, Express, and Next.js. Highly skilled in end-to-end software development, implementing CI/CD pipelines (GitHub Actions, GitLab), database management, and ensuring code quality through comprehensive testing methodologies

Professional Experience

Systems Analyst, Sinarmas	01/2026 – Present Jakarta, Indonesia
Software Developer and Systems Analyst, LAYANA.ID	08/2024 – 12/2025 Yogyakarta, Indonesia
Software Developer, HRH Synergy Nusantara Tech	11/2024 – 01/2025 Yogyakarta, Indonesia
Quality Assurance, Jogjawebcamp	03/2024 – 07/2024 Yogyakarta, Indonesia
Web Developer, TK ABA Krapyak Wetan	03/2023 – 07/2023 Yogyakarta, Indonesia
UI/UX Designer Intern, TVRI Nasional	02/2022 – 03/2022 Yogyakarta, Indonesia
Graphic Design & IT Support, PrintShop	08/2018 – 09/2019 Yogyakarta, Indonesia

Education

Bachelor of Information Technology, Muhammadiyah University of Yogyakarta GPA: 3.72 /4	09/2019 – 07/2023 Yogyakarta, Indonesia
• Graduated on time with Cumlaude predicate • Actively participated in more than 13+ campus events, webinars, and leadership and self-development training.	

Skills

Hard Skill

Software engineering professional with expertise in full-stack development (Laravel, React, Vue, Next.js, TypeScript, Figma) and database management (MySQL, PostgreSQL). Highly committed to product quality through automated testing (Playwright, Appium, Selenium, Katalon), API testing (Postman, Swagger), and robust test management (Jira, TestRail). Experienced in implementing DevOps and CI/CD practices (Git, GitHub Actions, GitLab) to ensure efficient and stable software release processes.

Certificates

Certified System Analyst (CSA)

by Badan Nasional Sertifikasi Profesi (BNSP)

QA Engineering

by Digital Skola

Quality Assurance

by Myskill

Software Development Fundamental With Java Virtual Bootcamp

by PT. Inixindo Persada

API Testing Path

offered by Postman Academy

Organisations

PT Astra International Tbk, *Volunteers in social service*

Volunteered in the social service program organized by Grow Up Human Capital Research & Development Center of PT Astra International Tbk, with the theme 'Spirit of Helping Each Other,' held in Jombang District, Cirebon Regency, West Java.

08/2022 – 09/2022

Cirebon, Indonesia

BEM SI (Badan Eksekutif Mahasiswa Seluruh Indonesia),

Member of Media Division

The National Work Meeting of the Student Alliance of Indonesian Universities (BEM SI) 2021 was held at Universitas Muhammadiyah Yogyakarta, where I was responsible for managing IT infrastructure to ensure seamless event operations

08/2022 – 09/2022

Yogyakarta, Indonesia

Projects

Luncsphere, *UI/UX Designer*

Designing a SaaS Web3 website application utilizing blockchain technology by conducting user research, developing interactive prototypes using Figma, optimizing a responsive user interface, and managing the project with Notion to ensure an intuitive and user-centered experience. I worked on this project full remote for a client based in the Netherlands.

Employee Leave Management System Website for TVRI Nasional, UI/UX Designer

This project is to develop an efficient and transparent employee leave management system for TVRI Nasional by designing an intuitive UI/UX using Figma, utilizing Google Forms as a data collection tool for leave requests, and implementing real-time leave tracking to significantly speed up the approval and management process.

Website TK ABA Krapyak Wetan

Software Developer and Systems Analyst Designed and built a CMS-based school website using Laravel and MySQL, featuring a comprehensive admin system and student registration module to enhance digital communication and increase the school's visibility.

Premi Air

Software Developer and Systems Analyst Analyzed and tested multi-platform airline applications (Laravel and React Native) covering Flight and Crew Management Systems, verifying complex API endpoints via Postman, and performing functional, regression, and usability testing to ensure optimal real-time flight tracking functionality.

E-commerce Sonus Hub

Software Developer and Systems Analyst Analyzed system requirements and supported the development of a B2B and B2G PWA platform for electrical material ordering and inventory management, seamlessly integrating Chat AI and Xendit payments while ensuring system scalability and transaction security through comprehensive end-to-end and performance testing using Playwright and Postman.

HopHop

Software Developer and Systems Analyst Analyzed system requirements and developed a multi-platform application for multi-branch outlet operations—encompassing order management, stock tracking, and sales reporting—by seamlessly integrating Midtrans and Grab Express, while ensuring optimal system performance through comprehensive API documentation with Swagger and rigorous testing via Postman and Appium.

Mobile Application for Loan Management System (LMS) BPR CMA

Software Developer and Systems Analyst Analyzed business workflows and contributed to the development and debugging of the BPR CMA mobile application using Visual Studio, ensuring a seamless user experience for loan applications, disbursements, and installment tracking through comprehensive API and mobile automation testing with Postman and Appium.

Studio Warna

Software Developer and Systems Analyst Analyzed system requirements and contributed to the development of a Kotlin and Laravel-based multi-platform application for photo studio management, integrating IoT camera hardware and Midtrans payments across CRM, ERP, HRM, and POS modules, while ensuring optimal real-time processing and system stability through comprehensive API and automated testing using Postman, Appium, and Playwright.

Sekola.id

Software Developer and Systems Analyst Analyzed system requirements and supported the development of a multi-platform Learning Management System (LMS) using Laravel and Kotlin, ensuring robust data integrity and seamless teacher-student interactions by designing test plans, conducting comprehensive manual and automated testing, and generating detailed API and user documentation.

Eagle Vision

Software Developer and Systems Analyst Analyzed system requirements and supported the development of a Laravel and React Native-based SaaS retail solution featuring HRIS, ERP, and task management with geolocation integration, while ensuring system stability and functionality through comprehensive technical documentation via Swagger UI and rigorous automated testing using Postman and Playwright.

Genesy

Software Developer and Systems Analyst Analyzed system requirements and supported the development of a Laravel-based multi-platform Warehouse Management System (WMS) featuring IoT integration for real-time asset tracking, while ensuring system reliability and facilitating future development through comprehensive API documentation via Swagger UI, database visualization using DBeaver, and rigorous performance testing with Postman.

Inastek

Software Developer and Systems Analyst Engineered a SaaS-based IoT monitoring web application using Express, Vue.js, and PostgreSQL for real-time device management, utilizing Playwright for automated testing and Swagger UI for API documentation.

LookzMe

Software Developer and Systems Analyst Analyzed system requirements and supported the development of a multi-platform CRM encompassing sales, booking, POS, and HRIS modules, seamlessly integrating Midtrans payments while ensuring data integrity and system stability through database management via DBeaver, automated testing with Selenium, and API verification using Postman.

MySalon

Software Developer and Systems Analyst Analyzed system requirements and supported the development of a Laravel and React Native-based CRM application for salons, seamlessly integrating Xendit payments while ensuring system reliability and facilitating future development through comprehensive technical documentation and automated testing using Postman and Appium.

Hemofilia

Software Developer and Systems Analyst Analyzed healthcare workflows and supported the development of a Laravel and React Native-based mobile application connecting hemophilia patients with their care teams to record symptoms, ensuring reliable data flow and facilitating future development through comprehensive API testing with Postman and detailed technical documentation.

Pickme

Software Developer and Systems Analyst Analyzed system requirements and supported the development of a Mobility as a Service (MaaS) application featuring booking and shuttle services, seamlessly integrating Xendit payments and OpenStreetMap while ensuring system scalability and reliability through rigorous performance testing, mobile verification via Android Emulator, and comprehensive API verification using Postman.

AESI E-commerce

Software Developer and Systems Analyst Analyzed system requirements and supported the development of a multi-vendor B2B and B2G PWA e-commerce platform for electrical material ordering and inventory management, seamlessly integrating Xendit payments to ensure secure transactions while validating system scalability under high user loads through end-to-end automated testing with Postman and Playwright.

SIMRS

Software Developer and Systems Analyst Analyzed healthcare workflows and contributed to the development of a digital Hospital Management Information System (SIMRS) to manage administrative and medical processes, seamlessly integrating the One Health BPJS platform for streamlined insurance claims, while ensuring secure data flow and scalability across medical records and financial modules through comprehensive API and automated performance testing using Postman and Playwright.

Kave pos

Software Developer and Systems Analyst Analyzed system requirements and supported the development of a Point of Sale (POS) system tailored for small to medium-sized businesses to optimize inventory management and financial reporting, while ensuring secure, high-volume transaction processing through comprehensive API and automated testing using Postman and Playwright.

Loista

Software Developer and Systems Analyst Developed and analyzed a web-based catalog and business management platform using Laravel and React.js to implement product display, inventory tracking, and financial reporting, while optimizing the system architecture for high transaction volumes and smooth payment integrations.

Tembi Historical Home

Software Developer and Systems Analyst Developed a bilingual web-based heritage hotel platform utilizing Next.js, TypeScript, and Tailwind CSS, featuring a dynamic admin CMS, room booking, and venue management, while managing a MySQL database, integrating the Xendit payment gateway.
